

PACKER MILLING AND RETRIEVING

Other name : Packer Milling Tool, Packer Retriever

DESCRIPTION

This tool allows recovering production packers, milling bridge plugs and retrieving packer in a single run.

Bridge plugs could be milled with a packer mill attached at the top of the tool or with a washover string.

There is a crushed carbide mill head at the bottom for clearing the packer bore and allowing the tool to pass through, and a grapple for catching and retrieving the packer. Extensions can be added between the grapple and the packer mill to provide sufficient length for the grapple to pass through the packer bore before milling, and assure the recovering of the packer.

Stinger and Catcher dressed with catch size on request according to the seal bore and/or millout extension.

STANDARD SPECIFICATIONS

Catcher sizes

Catch Size (Packer ID)	2,688"	3,250"	4,125"
